# Challenge Instructions

## Interview Challenge: Finance / Digital Banking

*The purpose of this challenge is to understand your skills and thought process, and how you apply them to product tasks.*

*The interview challenge is designed to replicate real case scenarios that a business analyst may face and needs to elicit requirements for the implementation. It serves as a valuable complement to in-person interviews, offering a practical assessment of your business analyst skills and approach.*

*In this exercise, there are no definitive 'correct' or 'incorrect' answers. Instead, we aim to gain insight into your problem-solving abilities, strategic thinking, and documentation techniques applied to the specific scenario and context.*

*We require you to complete at least the mandatory modules before the technical interview, being the optional modules desirable to complete a more thorough assessment.*

### **Context and situation**

*"XYZ" bank is one of the top leaders in a small country on personal banking and it has been downsizing its offices around big cities, preserving small cities' attendance at 100%.*

*Aligning to this goal, they are reinforcing digital platform use.*

*The bank does not yet have a mobile application, only web online banking is available and client complaints are increasing as they can't operate as they wish to operate on their mobile devices.*

*By listening to the voice of the customer, they want to develop a new digital banking product for the mobile experience, covering both platforms: website and mobile.*

### **Requirements**

*The new product must allow customers to perform the following operations:*

- *Transfers between own accounts*
- *Transfers between accounts of different banks*
- *Pay services*
- *Cash deposits*
- *Cash withdrawals*

*The solution must meet the following security and performance standards:*

- *Availability: The system must be available 99.9% of the time.*

- *Security & Accessibility: The system must protect customer information and meet accessibility requirements for this industry.*
- *Performance: The system must respond within 2 seconds.*

### **Assumptions**

- *The existing web solution already counts with the described features and additional ones.*
- *The solution must apply to both cell phones and tablets.*

## **Jobs to be done**

### **Required**

1. *Create a story mapping for the product*
2. *Create a high-level roadmap for implementing a first version of this product and provide an explanation about the functionalities that you consider top priority for this version.*
3. *Add at least one KPI related to one goal the client or team wishes to accomplish*
4. *Select 3 PBIs and draft the complete user stories adding further details: Description, AC, Wireframes, etc. If possible, include at least one user story covering back-end or technical requirements.*

### **Optional**

5. *Define the target personas for your product*
6. *Include a SWOT analysis of the top 3 competitors of your product. Hint: you could use a generative AI tool for this ;)*
7. *State the product vision*
8. *Provide the product backlog including functional and non-functional requirements.*

**Note:** *Please make all the assumptions that you consider in the product solution and deliver this exercise as a single file.*

# STORY MAPPING for XYZ Bank's Mobile Banking Product

EPICS	Account Management	Transfers	Payments	Cash Operations	Security & Authentication	Performance & Availability
FEATURES (TASKS)	View account balance	Transfer between own accounts	Pay utility bills	Deposit cash	Log in securely	Ensure system availability (99.9% uptime)
	View transaction history	Transfer to accounts in different banks	Pay credit card bills	Withdraw cash	Set up two-factor authentication (2FA)	Optimize system response time (<2 seconds)
		View transfer history	View payment history	Locate nearest ATM	Reset password or recover account	
USER STORIES	As a customer, I want to view my account balance, so that I can track my finances.	As a customer, I want to transfer money between my own accounts, so that I can manage my funds.	As a customer, I want to pay my utility bills, so that I can avoid late fees.	As a customer, I want to deposit cash, so that I can add funds to my account.	As a customer, I want to log in securely, so that I can access my account safely.	As a customer, I want the system to be available 99.9% of the time, so that I can access my account whenever I need to.
	As a customer, I want to view my transaction history, so that I can monitor my spending.	As a customer, I want to transfer money to accounts in different banks, so that I can send money to others.	As a customer, I want to pay my credit card bills, so that I can avoid late fees.	As a customer, I want to withdraw cash, so that I can access my money.	As a customer, I want to set up two-factor authentication, so that I can enhance the security of my account.	As a customer, I want the system to respond within 2 seconds, so that I can perform tasks quickly.
		As a customer, I want to view my transfer history, so that I can keep track of my transactions.	As a customer, I want to view my payment history, so that I can track my expenses.	As a customer, I want to locate the nearest ATM so that I can perform cash operations.	As a customer, I want to reset my password or recover my account, so that I can access if I forget my credentials.	

## MVP ROADMAP

Phase	Duration	Key Deliverables
Discovery & Planning	2 weeks	<ul style="list-style-type: none"> <li>Finalize requirements</li> <li>Define MVP scope</li> <li>Create wireframes and prototypes</li> </ul>
Core Development	6 weeks	<ul style="list-style-type: none"> <li>Develop core features (account management, transfers, security, etc.)</li> <li>Backend integration</li> </ul>

Testing & Refinement	3 weeks	<ul style="list-style-type: none"> <li>Conduct user acceptance testing (UAT)</li> <li>Fix bugs and refine features</li> </ul>
Launch MVP	1 week	<ul style="list-style-type: none"> <li>Deploy MVP to production</li> <li>Monitor performance and gather feedback</li> </ul>

## Prioritized Functionalities for MVP

Functionality	Features	Reason for Priority
Account Management	<ul style="list-style-type: none"> <li>View account balance</li> <li>View transaction history</li> </ul>	Customers need to view and manage their finances effectively.
Transfers	<ul style="list-style-type: none"> <li>Transfer between own accounts</li> <li>Transfer to accounts in different banks</li> <li>View transfer history</li> </ul>	Transfers are a core banking operation and a major customer pain point.
Security & Authentication	<ul style="list-style-type: none"> <li>Secure login (biometric, PIN)</li> <li>Two-factor authentication (2FA)</li> <li>Password reset and account recovery</li> </ul>	Security is critical for gaining customer trust and ensuring compliance.
Performance & Availability	<ul style="list-style-type: none"> <li>Ensure 99.9% system availability</li> <li>Optimize system response time (&lt;2 seconds)</li> </ul>	A fast and reliable system is essential for customer satisfaction.
Payments	<ul style="list-style-type: none"> <li>Pay utility bills</li> <li>Pay credit card bills</li> <li>View payment history</li> </ul>	Paying bills is a common use case for digital banking users.

## KPI (Key Performance Indicator) for the MVP

As the client's goal is to **increase digital platform usage** and **reduce customer complaints** related to the inability to perform banking operations on mobile devices, here's a **KPI** that **aligns with one of the primary goals** of the project.

KPI	Definition	Target
Customer Adoption Rate	<p>The percentage of existing online banking users who download and actively use the new mobile banking app within the first 3 months of implementation.</p> <p><b>Formula:</b>  <math display="block">\text{Customer Adoption Rate} = (\text{Total Number of Online Banking Users} / \text{Number of Active Mobile App Users}) \times 100</math></p>	Achieve a <b>30% adoption rate</b> within the first 3 months.

## How to Track the KPI

### 1. Data Collection:

- Track the number of downloads from app stores (*Google Play, Apple App Store*).
- Monitor the number of active users.
- Use analytics tools to gather data on user engagement.

### 2. Reporting:

- Generate reports on the adoption rate.
- Share insights with stakeholders to assess progress toward the goal.

### 3. Improvement Actions:

- If the adoption rate is below target, perform user surveys or interviews to identify obstacles.
- Implement improvements based on feedback.

## 3 Product Backlog Items (PBIs) with Complete User Stories

Below are 3 detailed user stories, including Description, Acceptance Criteria (AC), Wireframes, and Technical Requirements.

### User Stories

#### 1. View Account Balance

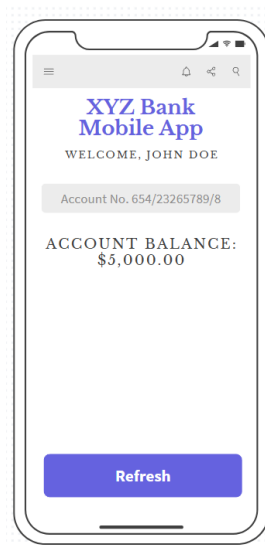

**Description:** As a customer, I want to view my account balance on the mobile app, so that I can track my finances.

**Acceptance Criteria (AC):**

- The account balance is displayed on the dashboard.
- The balance is updated in real-time whenever the user refreshes the screen.
- The balance is displayed in the local currency.
- If there are multiple accounts, the user can toggle between them to view individual balances.

- The balance is only visible after the user logs in securely.

**Wireframe:**

**Technical Notes:**

- The balance data will be fetched from the bank's core banking system via an API.
- Ensure the API response time is optimized to meet the 2-second performance requirement.

## 2. Transfer Between Own Accounts

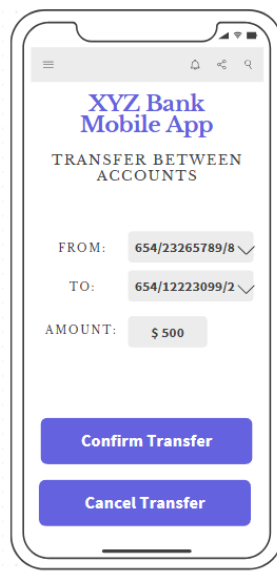

**Description:** As a customer, I want to transfer money between my own accounts, so that I can manage my funds.

**Acceptance Criteria (AC):**

- The user can select a source account and a destination account from a dropdown list.
- The user can enter the transfer amount.
- The user must confirm the transfer.
- The user can cancel the transfer.
- The transfer must be processed instantly, and the updated balances must be reflected in real-time.
- The user receives a confirmation message with a transaction ID after the transfer is successful.

**Wireframe:**

#### Technical Notes:

- The transfer functionality will use the bank's existing backend API for inter-account transfers.
- Ensure the API is secure and complies with industry standards (e.g., encryption, authentication).

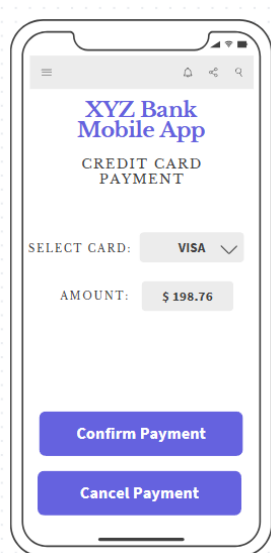

### 3. User Story: Credit Card Payment

**Description:** As a customer, I want to pay my credit card bill using the mobile app, so that I can avoid late fees and manage my debt effectively.

#### Acceptance Criteria (AC)

- The user can select a credit card from a list of linked cards.
- The user can enter the payment amount.
- The user must confirm the payment with a secure authentication method (e.g., PIN or biometric).
- The user can cancel the payment.
- The payment must be processed instantly, and the updated credit card balance must be reflected in real-time.
- The user receives a confirmation message with a transaction ID after the payment is successful.

#### Wireframe:

#### Technical Notes:

- The payment functionality will use the bank's existing backend API for credit card payments.
- Ensure the API is secure and complies with industry standards (e.g., encryption, authentication).
- Integrate with the credit card system to fetch real-time balances and transaction details.

## Target Personas for XYZ Bank's Mobile Banking Product

### 1. Techie Professional

#### Demographics

- **Age:** 25–40
- **Occupation:** Young professionals, entrepreneurs, or freelancers

#### Goals

- Manage finances efficiently.
- Perform banking transactions quickly.
- Access advanced features.

#### Pain Points

- Limited time due to a busy schedule.
- Frustration with slow banking apps.
- Concerns about data security and privacy.

#### Behavior

- Prefers mobile apps over desktop.
- Uses smartphones for most daily tasks.
- Expects an intuitive user experience.

## 2. Small Business Owner

### Demographics

- **Age:** 30–50
- **Occupation:** Owners of small to medium-sized businesses (e.g., retail shops, restaurants)

### Goals

- Manage business finances (e.g., payroll, vendor payments) efficiently.
- Access real-time account information to make decisions.
- Simplify cash flow management.

### Pain Points

- Difficulty in tracking business expenses and income.
- Limited time to visit bank branches.
- Concerns about transaction fees and processing times.

### Behavior

- Uses both mobile and desktop platforms for banking.
- Prefers apps with features adapted to business needs (e.g., bulk payments).
- Values reliability and security for business transactions.

## 3. Retiree

### Demographics

- **Age:** 60+
- **Occupation:** Retired

### Goals

- Access account information easily.
- Perform basic transactions (e.g., transfers, bill payments) without visiting a branch.

### Pain Points

- Difficulty using complex digital platforms.
- Concerns about online security and scams.
- Limited familiarity with mobile apps.

### Behavior

- Prefers simple and intuitive interfaces.
- Relies on family or bank staff for technical support.
- Uses mobile apps for basic tasks but may still visit branches for complex transactions.

## 4. Student

### Demographics

- **Age:** 18–25
- **Occupation:** College or university students

### Goals

- Manage limited finances effectively.
- Track spending and save money.
- Perform basic banking tasks (e.g., transfers, bill payments) easily.

### Pain Points

- Limited financial knowledge.
- Difficulty managing expenses.
- Frustration with apps that lack student-friendly features.

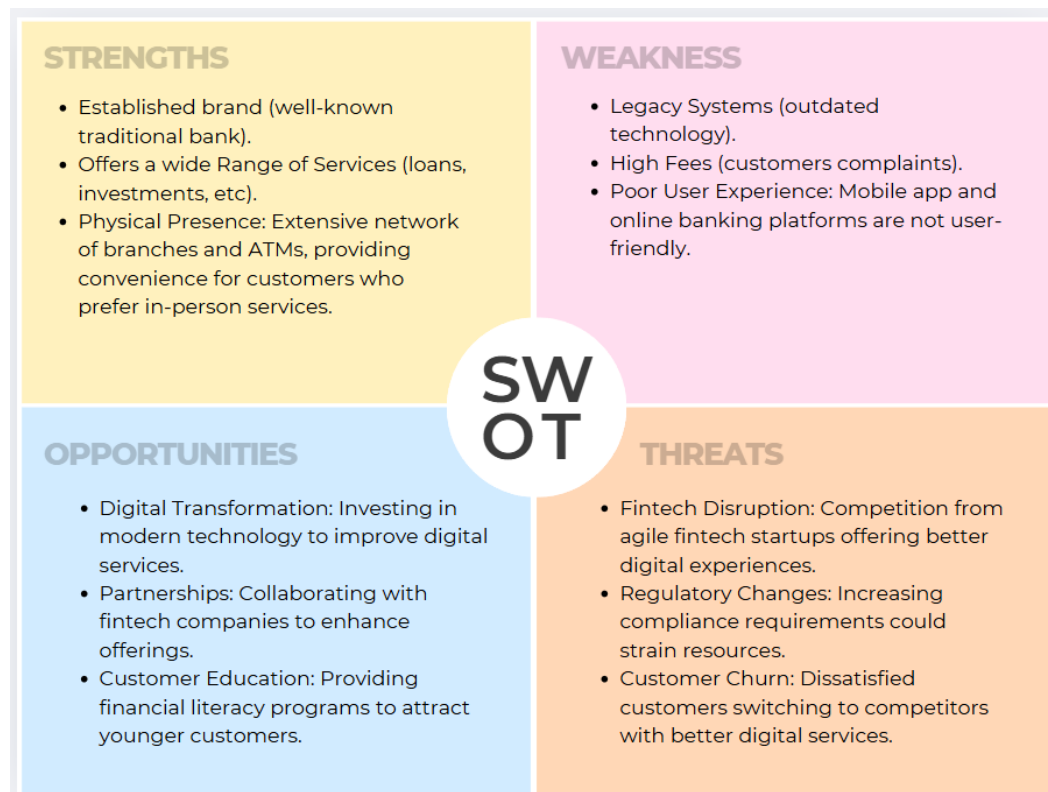

### Behavior

- Highly tech-savvy and comfortable with mobile apps.
- Prefers apps with modern designs and social features (e.g., peer-to-peer payments).
- Uses smartphones for most daily activities.

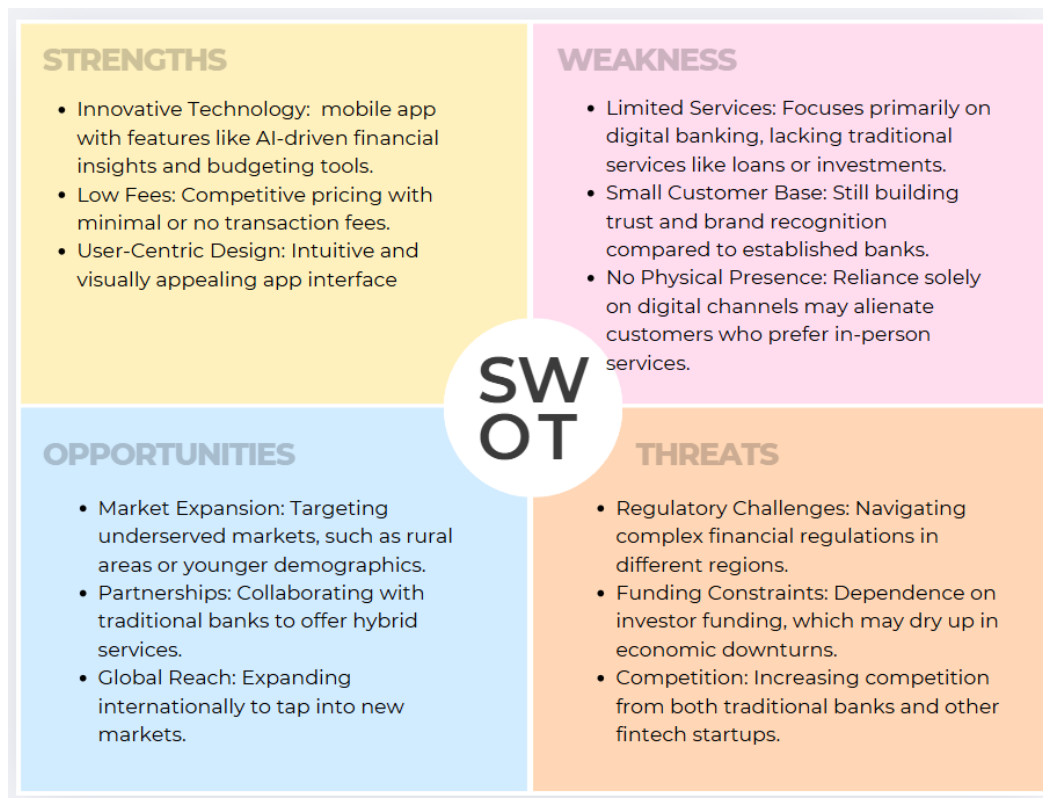

## SWOT Analysis of Top 3 Competitors

To understand the competitive landscape for XYZ Bank's mobile banking product, we'll analyze the **Strengths**, **Weaknesses**, **Opportunities**, and **Threats** (SWOT) of three key competitors.

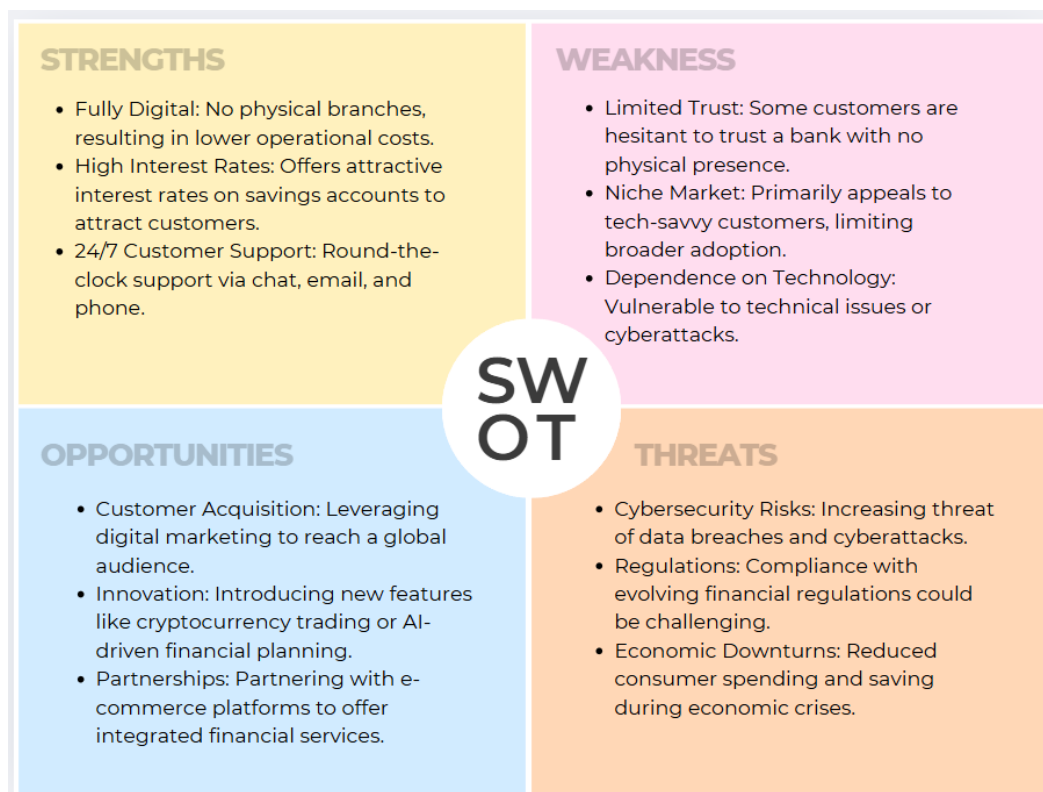

### Competitor 1: Competitor Bank A

## Competitor 2: Fintech Startup B

## Competitor 3: Digital-only Bank C

# Product Vision

"We want to give you a smooth, safe, and easy-to-use mobile banking app that makes managing your money simple, works for everyone, and builds trust. This way, you can reach your financial goals whenever and wherever you need to."

## Product Backlog

Below is the product backlog organized by priority according to the MoSCoW method.

### 1. Must-Have (MVP)

#### Functional Requirements

- **Account Management**
  - View account balance.
  - View transaction history.
- **Transfers**
  - Transfer money between own accounts.
  - Transfer money to accounts in other banks.
  - View transfer history.
- **Payments**
  - Pay credit card bills.
- **Security & Authentication**
  - Secure login (biometric authentication, PIN).
  - Two-factor authentication (2FA).
  - Password reset and account recovery.
- **Performance & Availability**
  - Ensure the app is available 99.9% of the time.
  - Optimize app response time (<2 seconds).

#### Non-Functional Requirements

- **Security**
  - Encrypt all customer data.
- **Accessibility**
  - Ensure the app meets accessibility standards (e.g., for visually impaired users).
- **Cross-Platform Support**
  - Support both iOS and Android devices.
  - Ensure compatibility with smartphones and tablets.

## 2. Should-Have (Post-MVP)

### Functional Requirements

- **Cash Operations**
  - Deposit cash via ATMs.
  - Withdraw cash via ATMs.
  - Locate nearest ATM.
- **Payments**
  - Pay utility bills (e.g. electricity, water).
  - Pay subscriptions (e.g., Netflix, Spotify).
- **Notifications**
  - Send real-time alerts for transactions, low balances, and security updates.

### Non-Functional Requirements

- **Scalability**
  - Ensure the app can handle a growing number of users without performance issues.
- **Localization**
  - Support multiple languages and currencies.
- **Offline Mode**
  - Allow limited functionality (e.g., view balance, transaction history) without an internet connection.

## 3. Could-Have (Future Releases)

### Functional Requirements

- **Investment Features**
  - Allow users to invest in funds or stocks.
  - Provide investment insights and recommendations.
- **Peer-to-Peer Payments**
  - Enable instant money transfers to friends and family.
- **Customer Support**
  - Integrate live chat or chatbot for customer support.

### Non-Functional Requirements

- **AI Integration**
  - Use AI to provide personalized financial advice.

## 4. Won't-Have (Out of Scope)

- **Cryptocurrency Trading**
  - Support for buying/selling cryptocurrencies.
- **Physical Branch Integration**
  - Features requiring in-branch visits (e.g., loan applications).
